PROPOSAL

PDF Template System

A small source-controlled document system for invoices, briefs, reports, and proposals. No fragile screenshots. No low-level PDF drawing code.

INVESTMENT

$6,400

2 focused weeks

1

Design language

Set print tokens, type scale, spacing, and reusable page patterns.

2

Templates

Build HTML/CSS templates backed by sample JSON and ugly-data tests.

3

QA + handoff

Render PDFs, check text extraction, thumbnails, and template rules.

DELIVERABLES

- Invoice template
- Report template
- Proposal template
- One-page brief
- QA checklist

ASSUMPTIONS

- Client owns final copy
- One visual direction
- A4-first layout
- Static data inputs

WHY THIS APPROACH

Use web design where it helps, then render through a print engine built for paged output.

Approve the source templates, then test with real long values before using in production.
